

Kids Explore!

Conservation Quest Scavenger Hunt

How does nature use and conserve resources? Find these things on a neighborhood walk or in your yard.

- A plant's solar collector
- Something that you can find in your body, in plants, in the air, and under the ground
- Something that uses wind power to move
- Something that makes its own food all year
- Something that keeps cold-blooded critters warm (hint: you can't put this in a bag!)
- A snack for an herbivore
- Something small and brown that could someday be taller than your house if you give it water and sunlight
- Something nature is recycling

Possible answers: a leaf, water, seeds or birds, an evergreen tree or ferns, sun, any plant, seeds, water or dead plants or bones etc.
